

TNG E-Wallet Redesign

Problem statement :

1. The app is not friendly to all ages. Older people have a hard time navigating through the apps primary functions such as reloading and paying using the e-wallet. This is because the buttons are to small which makes it difficult to see . There are also to many buttons which leads to different services on the home page that makes it confusing for them.
2. Too much services and promotions are on the front application makes it full of clutter as only 11 percent of users use the other services. The app has too many things situated in one place and makes it look heavy.
3. Accessibility to simple and easy e wallet using to make life more simpler.Young people use the e wallet to be faster when making payment thus it would be better if the main buttons are bigger, cleaner and more direct .

Research :

TIMELINE	USERS
2019	4 million
2020	10 million
2021	15million +

USER FLOW

User Flow:

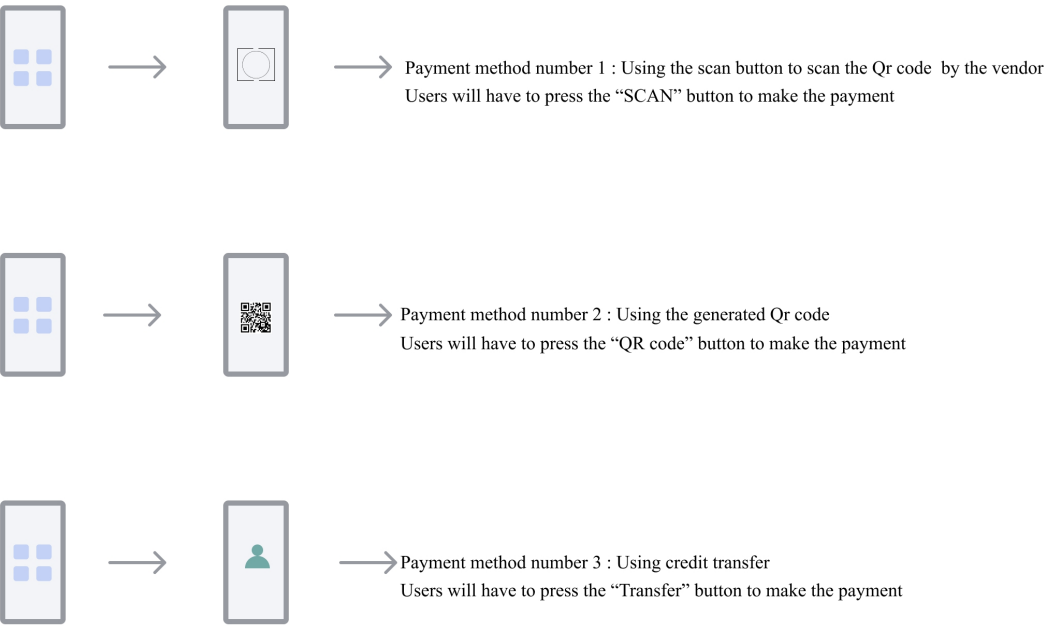

User registration for application :

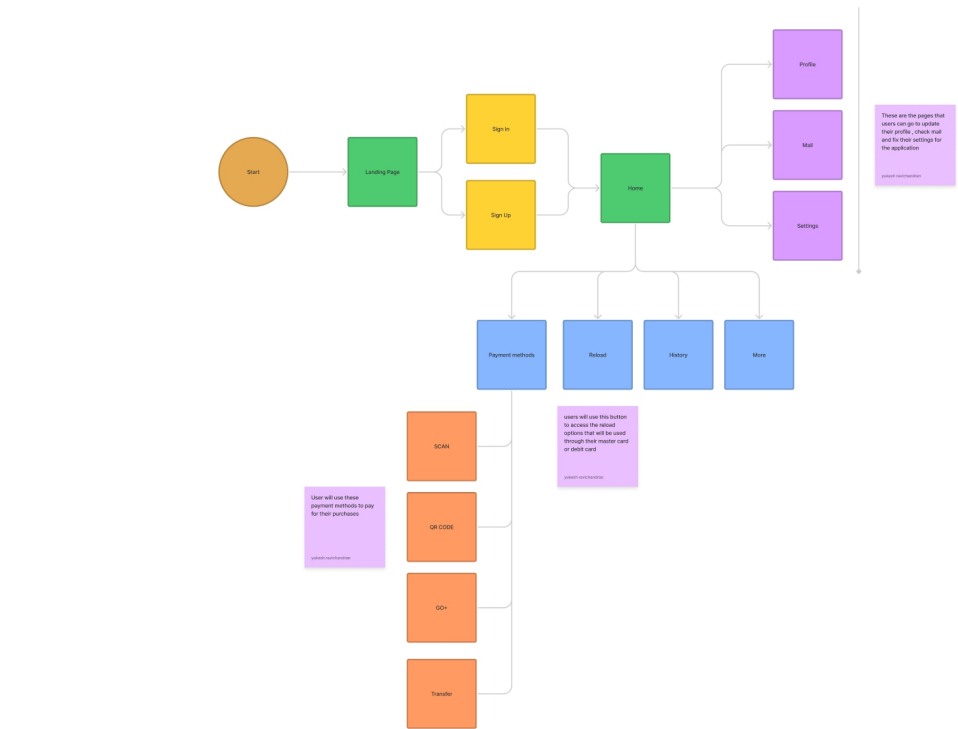

- User enters & greeted with
- The "lets get start the regi
- The "login" users
